

CA-1006.

The CA1006 sets a new standard for performance at its price. The CA1006 uses the latest HAL developments in digital amplifiers. The CA1006 combines ten source inputs* with twelve channels of bridgeable amplification.

The CA1006 can be combined with a slave to increase zone capacity to a maximum of twelve. Of course any combination of three zones to twelve zones is available when you consider bridging channels for zones. Effectively every resource is used maximising the value to the customer.

You can also combine HAL's 4 source 8 zone video distribution module, IRIS with the CA1006. With high definition 300Mhz bandwidth and modular design, multiple IRIS can be daisy chained to distribute S-Video and component with or without composite video as well. +

The CA1006 includes six keypads (KP-1) and six remotes (RH-10) for handheld operation of all sources and features of the CA1006. Keypads can be interchanged for HAL IRM (In-speaker receiver module).

* Eight source inputs plus two source inputs via HAL LS-1.

+ HAL IRIS RGB

Features

- One box solution for audio and video
- Ten audio source inputs
- Six zone audio output
- High efficiency twelve channel bridgeable amplifier
- Power output in stereo mode 80 watts per channel @ 4 ohm
- Expansion bus to second CA1006 for up to twelve zones
- Internal docking bus for addition of multiple video modules to distribute up to component video
- Adjustable audio controls including bass, treble, loudness, maximum volume and start up volume
- HAL Dual Mode no fuss central IR Learning
- RS232 control port

IRIS (Optional)

- Four video source inputs
- Eight zone video outputs
- 300Mhz video outputs
- 3 Step equalised video gains in 3db increments
